Module Code	MEU33EM5
Module Name	Manufacturing Systems 1
ECTS Weighting ¹	5 ECTS
Semester taught	Semester 2
Module Coordinator/s	Dr. Shuo Yin and Dr. Garret O'Donnell
Module Learning Outcomes with reference to the Graduate Attributes and how they are developed in discipline	On successful completion of this module, students should be able to: Learning outcome for Manufacturing Systems 1. describe manufacturing planning and control strategies (e.g. MRP, MRP II, JIT); 2. construct a materials requirement plan from a bill of materials and master schedule using finite and infinite capacity; 3. assess the influence of costs on a plan; 4. link DFM and layout strategies with production planning and control; 5. identify the key differences between product and process layouts; 6. identify and quantify key metrics for creating manufacturing cells;
	Learning outcomes for Project and wider aspects of Man Sys 7. define quality metrics for manufacturing; 8. understand the role standards in quality and manufacturing systems; 9. Define possible quality metrics for use case products in advanced manufacturing; 10. understand digitalisation in manufacturing; 11. Use life cycle analysis tools to examine life cycle of an engineered product; 12. Develop a sustainability infographic for selected projects; 13. Understand role of ISO standards related to manufacturing sustainability; 14. Define scope of agile PM for new product introduction;
	Graduate Attributes: levels of attainment To act responsibly - Not embedded To think independently - Attained To develop continuously - Introduced To communicate effectively - Not embedded

Module Content

This module provides a general introduction to operations management of manufacturing systems. It will explore strategies for operating and optimising the production of products in different varieties and volumes with limited resources and in competitive environments. The impacts of design decisions on manufacturing performance and the physical organisation of plants are explored through various DFM and plant layout strategies. Aspects of project management are considered.

Teaching and Learning Methods

The module encompasses a diverse range of teaching and learning strategies. The module is taught using a combination of lectures, assignments, and tutorials. The bulk of the module material (notes, tutorials) are provided as handouts.

		i	.,		
Assessment Details ² Please include the following:	Assessment Component	Assessment Description	LO Addressed	% of total	
	Continuous Assessment	Assignment + In class test	LO 1-14	100	
Reassessment Requirements	As this course is 100% continuous assessment and involves substantial groupwork, supplemental examination will have to be discussed with lecturer				
Contact Hours and Indicative Student Workload ²	Contact hours: 44				
	Independent Study (preparation for course and review of materials): 5				
	Independent Stud of assessment): 5	dy (preparation for assessmei	nt, incl. com	oletion	
Recommended Reading List	 Operations Management, Slack, Chambers, Harland and Johnston, 3rd edition, Pitman, 2003 Production and Operations Management, Heizer and Render, 3rd or later edition, Allyn and Bacon, 2002 				
	 Manufacturing Planning and Control Systems, Vollman, Berry and Whybark, 4th edition, McGraw Hill, 1997 				
Covid-19 contingencies	The face-to face teaching will be moved to online teaching if Covid-19 outbreaks again.				
Module Pre-requisite	N/A				
Module Co-requisite	N/A				
Module Website	N/A				

Week due

14

Are other Schools/Departments involved in the delivery of this module? If yes, please provide details.	No
Module Approval Date	05/09/2023
Approved by	Nicole Byrne
Academic Start Year	2023
Academic Year of Date	2023 - 2023
